Evidence of effects

I have experienced evidence contradicting global warming.
There has been increased in the frequency of extreme weather events
There has been increase in the spread of vector-borne tropical diseases
There has been increase in heat-related deaths
There has been increase in the sea levels due to thermal expansion of water and melting of glaciers and polar ice caps
Global warming is happening.
I have personally experienced global warming.
The world's temperature has been going up slowly over the past 100 years.
Global warming is going to affect future generations.

Evidence by authority

There are more scientific studies against global warming
Most sources of temperature data show no global warming trends
Scientific findings indicate that global warming is happening and the earth is getting warmer.
There is a lot of disagreement among scientists about whether or not global warming is happening
Scientific findings regarding global warming are reliable.
Scientific findings regarding global warming are correct.

Evidence of causes

The rise in the world's temperature is being caused mostly by things people do.
Natural causes are the predominant reasons for the increase in Earth's temperature.
The rise in the world's temperature is due to combination of things people do and natural causes.
The Greenhouse effect plays the most important role in global warming
Man-made carbon dioxide emissions increase the Greenhouse effect.
Increase in the number of humans is the main cause of global warming.
Increase in human population is directly a cause of global warming, because there will be more carbon dioxide and heat, generated from human bodies.
Most of carbon dioxide emissions are from the third world.
Using more water is one of the causes of global warming.
Increase in human population means more need of carbon based fuels, and that is the main cause of the increase in Greenhouse gasses.
Global warming is due to an increase activity in the Sun's solar output.
Global warming in due to changes in the natural patterns of Earth's rotation around the sun.
Air pollution affects the climate.
Polluting rivers and seas affect the climate.

Importance

Global warming is an increasingly important issue.
Global warming will cause humans to become more aware of their environment.
Global warming is going to affect me.
Global warming is a Western construct.
If nothing done about Global warming, our living conditions will dramatically change in the next decade.

If nothing done about Global warming, in about 100 years Earth may not be fit for human habitation.
I consider myself knowledgeable on the topic of global warming

Solution
There is time to stop global warming.
We cannot stop Global warming.
Nature mitigates the problem of Greenhouse Gases naturally.
Governments should actively come up with plans to control the pollution of their own industries.
Governments should not interfere with how the industries operate, and the open market system will fix the problem of global warming.
First world countries should sanction third world countries which do not reduce their carbon dioxide emissions.
Efforts to quickly reduce human greenhouse gas emissions would be costly and would not stop Earth's climate from changing.

Demographics
Age group: 1. 18-29 2. 30-39 3. 40-49 3. 50-59 4. 60-70 5. Over 70
Education: Elementary, High School, College, Graduate School

What is your occupation? 1. Professional/management 2. Administrative/technical 3. Small business owner 4. Skilled/trades person/self employed 5. Seasonal worker 6. Student 7. Retired (if retired, list previous occupation)_____ 8. Other? _____

Gender: 1.Male 2. Female

Are you the parent or guardian of one or more children under the age of 18, or not?

Nationality:
Do you live inside or outside of country of origin?

Which of the following categories best describes you today? (Check one)
(1) _____ Atheist I do not believe in God.
(2) _____ Agnostic I believe we can't really know about the existence of God.
(3) _____ Unsure I don't know what to believe about God.
(4) _____ Spiritual I believe in God, but I'm not religious.
(5) _____ Religious I believe in God and practice a religion.

In what economic class do you consider your family to be in?
Upper class, Upper middle class, lower middle class, working class, lower class (from Thompson and Hickey 2005)

Political affiliation: left to right
